

TETHERVIEW SYNC

SHARE FILES SAFELY

Maintain complete control of your shared files with TetherView Sync. TetherView Sync allows businesses to collaborate and share data with a high level of control and accountability.

HERE'S HOW IT WORKS

TetherView Sync provides a workspace within your secure Private Cloud that can be shared as an attached drive or as a link inside or outside of your Private Cloud.

Users outside your network can access files and folders by using links. End-to-end encryption allows files to remain at the same level of compliance, encryption, control and audit traceability. You can share folders or individual files for a pre-set amount of time based on your needs. There is an option to mark them as 'read only' to allow users to view, but not change the content.

TetherView Sync also provides a data drop only function, where guests can upload files. In a drop only mode, guests will not be permitted to view or download other files.

PRICING

TetherView Sync is included with every Virtual Desktop. Stand alone Sync environments are available.

- ✓ **Live Collaboration**
- ✓ **End-to-End Encryption**
